

Abishek Socrates

Site Reliability Engineer

📞 9087280601 @ abisheksocrates01@gmail.com 📍 Chennai

SUMMARY

Site Reliability Engineer with nearly 5 years of experience in AWS, Kubernetes, Terraform, and CI/CD automation. Proven track record of optimising cloud infrastructure, leading PostgreSQL migrations, and reducing operational costs through automation and platform modernisation.

EXPERIENCE

Infrastructure Consultant

Thoughtworks

📅 06/2024 - Present 📍 Chennai, India

- Led migration of PostgreSQL 12 from Amazon RDS to Aurora PostgreSQL 17 and eliminated approximately **\$2,000/year** in AWS Extended Support costs while modernising the database platform and improving scalability.
- Designed and delivered a cloud-native wealth management platform on AWS using **Terraform, Amazon EKS, and Istio**, with Buildkite enabling **automated infrastructure provisioning and CI/CD**.
- Strengthened cloud security by implementing least-privilege IAM and IRSA access models, along with secure **authentication and authorization** mechanisms using Cognito.
- Integrated **OWASP ZAP** with the application to automate **Dynamic Application Security Testing (DAST)** within the CI/CD pipeline, enabling early detection of web application vulnerabilities and strengthening the overall security posture.
- Implemented **zero-downtime application deployments** using Kubernetes RollingUpdate strategies, readiness/liveness probes, PodDisruptionBudgets, and workload distribution across nodes.
- Developed an AI-powered automation POC using **Ollama, LiteLLM, and MCP**, integrating LLM-driven agents with GitHub tooling to automate infrastructure and repository operations through natural-language commands.
- Performed a migration initiative to move our internal automation bot (Stage bot) from a single TeamCity server setup to a **multiserver architecture** using feature flags and phased rollout.
- Migrated TeamCity projects to a modern CI/CD server, reducing operational overhead and saving **~\$2,400 per server** annually.
- Developed **production-grade Shell automation** for infrastructure operations, health checks, deployment validation, and troubleshooting across AWS and Kubernetes environments.
- Enhanced the reliability and security of a cloud-native wealth management platform by implementing **AWS CloudFront** and **AWS WAF**, improving end-user response times, reducing backend traffic, and mitigating application-layer attacks through managed and custom WAF rule sets.
- Designed and maintained **modular Terraform infrastructure** for AWS environments, enabling reusable and standardized provisioning across development, staging, and production.

DevOps Engineer

AVASOFT

📅 01/2022 - 05/2024 📍 Chennai, India

- Consolidated 6 domains into a unified platform, enhancing reliability and maintainability, while reducing administrative overhead by 30% and significantly cutting annual licensing costs.
- **Mentored** and guided two junior DevOps engineers, accelerating their onboarding by approximately three months through structured knowledge sharing, hands-on training, and best practices in DevOps tools and workflows.
- Implemented centralized **Terraform** state management using Amazon S3 with state locking, enabling safe concurrent infrastructure changes, state recovery, and controlled collaboration across engineering teams.
- Deployed and maintained a **cloud cost management** platform on Azure Kubernetes Service using Azure DevOps pipelines for automated releases.
- Enabled observability and improved **performance monitoring** and incident resolution for Kubernetes with Dynatrace.
- Assessed cloud infrastructure for a logistics client and delivered **optimization recommendations**, boosting efficiency and performance.
- Configured and managed VMware **vSphere** virtualised environments, optimising compute and storage resource utilisation, improving infrastructure scalability, and ensuring high availability for business-critical workloads.
